

1 **ABSTRACT OF THE DISCLOSURE**

2 A feeding device for a table saw includes a sliding board slidably
3 mounted on one side of a worktable of the table saw and having a moving
4 direction corresponding to a saw blade. The sliding board includes two grooves
5 defined in two opposite sides thereof and respectively parallel to the moving
6 direction of the sliding board. A moving seat is selective slidably mounted on
7 one side of the sliding board. A pushing rod is laterally slidably mounted to the
8 moving seat and has a first side forming a pushing face for abutting against a
9 datum of a workpiece. A first locking device and a second locking device
10 respectively extend through the pushing rod and the moving seat to selectively
11 hold the pushing rod and the moving seat in place for confirming a cutting angle
12 of the workpiece.
